

house tour

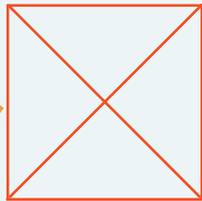

the SNAP House

3. Leading visitors through the flexible bedroom and spacious bathroom, a third Decathlete will describe material choices, our passive ventilation system, and built-in furniture.

1. A Decathlete will greet visitors at the site's entrance, distributing tour books and introducing the SNAP House.

2. In the office and entertainment center, a second Decathlete will monitor traffic flow, and demonstrate the SNAP Comm, the touch-screen interface that monitors energy production and controls the interior environment.

4. Visitors are free to explore the SNAP House's kitchen and dining areas.

6. In the Hospitality Tent, visitors may ask questions, interact with material samples, and find out how to learn more about solar power.

5. Guests exit the house through its south sliding doors onto the deck, where a Decathlete will describe our PV system, electric car, hot water system and use of batteries.
